

Who We Are

The San Bernardino County Flood Control District (SBCFCD) manages the regional flood protection functions for San Bernardino County with authority granted via State legislation enacted in 1939.

The District has developed a very extensive system of facilities, including dams, conservation basins, channels, and storm drains. The purpose of these facilities is to intercept and convey flood flows through and away from the major developed areas of the County.

**WE ARE
HERE TO HELP !**

Generally, the larger a proposed activity is in scope, the more extensive the Flood Control Permit process may become.

It is in the best interest of the project proponent to contact the SBCFCD before a Flood Control Permit application is submitted. SBCFCD staff will be able to advise and answer crucial questions, that will help permit applicants navigate the permit process. This will help to ensure that all major concerns are recognized early on in the process.

"Our job is to create a county in which those who reside and invest can prosper and achieve well-being"

Jurupa Basin

As part of its maintenance responsibilities, the San Bernardino County Flood Control District must have our basins and channels cleared of accumulated material each year. This material may be removed by contractors through the District's Soil Removal Program. If there are time constraints, District forces may haul the material to a stockpile location for future removal. This accumulated material may be suitable for various construction projects.

MATERIAL

Any available surplus material is listed on the District's surplus material listing which is updated monthly. Surplus material typically consists of sand, gravel, boulders/cobbles, dirt, vegetation, and other miscellaneous debris.

PROCEDURE

For quantities in excess of 10,000 c.y., a Solicitation for Proposals is released. Job walks on site are often included as part of the process. Typically, proposals are due one to two weeks after a solicitation. Acceptable proposals must include the quantity of material in cubic yards the proposer can remove, proposed price per cubic yard of material, to be paid to the District and the anticipated duration of the removals. These factors, along with the proposer's past performance with the District and the jurisdictional city or community, will be used to evaluate and select one or more contractors who can provide the best service to the District and the community.

Negative proposals (ones that ask the District to pay the permittee) will not be accepted.

San Sevaine Basin

Twin Creek Basins

NO PROPOSALS

If no proposals are received by the requested deadline, the materials will be left on an availability list for a period of six months, during which time the District can negotiate a permit with any contractor for the removal of the material. If no contractor is permitted within the six month period, the material may be advertised again.

NOTIFICATION

A list of contractors is kept in the Permits/ Operations Support Division. Those contractors are notified via email when a Solicitation for Proposals is released. The Solicitation is also posted on our website and on Twitter.
